

# History of Planet Earth

23.11.2017

ABHIRAM BELLUR (01FB16ECS013)

ADITYA VENKATESH (01FB16ECS032)

## Overview

This project demonstrates how planet Earth evolved over the years. It deals with the geological phenomenon that caused the Earth to be as it is today. In the beginning, all landmasses on Earth were joined and formed the supercontinent known as Pangaea. Pages linked to the home page contain more information about the various stages of the tectonic plate movement.

## Technologies Used

HTML

PHP

Javascript

CSS

## Goals

1. To clearly demonstrate in a simple and easy way how the Earth has evolved to become what it is. All continents have their own timeline of evolution showing how they were created.
2. To learn how to better use and implement PHP, JS and CSS to create a fully functional website.

There is no plagiarism involved in this project in any way.
